SKILLS

Technical Skills	Python, SQL Server, PySpark, SparkSQL, HiveQL, Scala, Microsoft Fabric, Azure Data Factory, Databricks, Azure Synapse, Power BI, RESTful API, ETL/ELT pipelines, C++, Star – Snowflake schema, DAX, Data Modeling, Data Warehousing, ADLS, Relational Databases
Big Data & Distributed	Hadoop, Hive, Spark, Amazon EMR, MapReduce, MPP Architectures, NoSQL Databases (MongoDB), SSIS, ADLS
Certification	Microsoft Certified: Fabric Analytics Engineer certificate , Microsoft Certified: Fabric Data Engineer Associate
Technology	Azure, AWS, EC2, S3, Glue, Lambda, ETL automation, Linux, Medallion architecture, Fabric Administration, Security-Architecture Review, Service Now, DSA, OOPs, CI/CD Deployment, Query Optimization, Data Quality, Troubleshooting – Documentation – Monitoring

EXPERIENCE

MAQ Software

January 2024 – present Noida

Data Engineer

- Designed and optimized **logical data models** and high-performance ETL pipelines in Azure Databricks using **PySpark**, reducing data processing time by 30%.
- Executed and deployed scalable data workflows using **ADF and Azure Synapse**, improving pipeline efficiency by 25%.
- Developed custom **Power BI dashboards** from raw datasets, decreasing reporting cycle time by 40% and empowering stakeholders with real-time insights. Implemented **Power BI Embedded** reporting using **Rest API and Python** custom dashboard.

Associate Data Engineer

- Created a model-driven **Power App** integrated with Dataverse, enabling cross-team Q&A workflows, and published resolutions via a wiki-style portal using Power Pages and JavaScript—boosting efficiency by 25% and reducing turnaround by 30%.
- Engineered custom UI components using **JavaScript, Xrm and WebAPI** to enhance model-driven app visuals which can fulfill the visualization need upon web API call, enabling 20% faster access to insights and helping UI/UX developers.
- Integrated **Power Automate with Azure Functions** to trigger backend logic from Power Apps, enabling real-time data validation and reducing manual errors by 35%. Created Build Verification Test – **BVT framework** for documenting SCD historical validation.

Talent Serve

June 2023 – July 2023 Mumbai

Software Engineer Intern

- Orchestrated a secure, user-centric **web platform using Django** to allow employees to submit mental health concerns anonymously, increasing participation by 30% which overall enhanced the mental wellbeing of the employees by 45% based upon data survey.
- Implemented responsive frontend components and **REST APIs**, improving user experience and achieving 95% positive feedback.
- Designed a **normalized SQL Server schema** with row-level security to store anonymized mental health submissions; integrated data pipelines using **ADF and SQL stored procedures** to enable secure reporting and sentiment trend analysis, enhancing insights by 45%.

PROJECTS

- Live Earthquake Data Visualization:** Formulated and deployed a real-time earthquake visualization platform leveraging Java, Python, MongoDB, **NoSQL**, and Unfolding Maps, integrating live data from the U.S. Seismic Data Center to enhance seismic analytics—processed 500K+ data points and improved event detection accuracy by 15%.
- Fabric Platform Tenant Administrative Tool:** Crafted a robust data extraction and visualization pipeline using Microsoft Power BI REST API and Fabric v2.0 API to retrieve critical tenant data. Orchestrated **ETL processes with Azure Data Factory** and transformed data using Azure Databricks, storing results in SQL Server. Reduced manual data handling by 40+ hours per month and empowered senior managers and sector admins with real-time Power BI dashboards for faster, data-driven decisions.
- Unified Marketing Intelligence Platform (UMIP):** Devised a cloud-based data pipeline using **Azure Data Factory and Databricks (PySpark)** to integrate marketing data from platforms like Google Ads, Facebook, and internal CRM. Transformed and modeled data into a **star schema in Synapse Analytics** and visualized key KPIs (CAC, ROAS) in Power BI with row-level security. Enabled 6-hour refresh cycles, reduced manual reporting by 80+ hours/month, and improved marketing ROI by 18%.
- Inventory Anomaly Detection System:** Built an automated analytics solution to detect stock irregularities across retail locations. Used **Azure Data Factory** to ingest daily sales and inventory data into Azure SQL DB. Wrote complex T-SQL scripts with window functions and CTEs to flag anomalies like stockouts, overstock, and phantom inventory. Visualized real-time alerts in Power BI, reducing inventory errors by 35% and saved 100+ hours/month in manual checks.

EDUCATION

Bachelor of Engineering – Computer Engineering, Thapar Institute of Engineering and Technology 8.22

2020 – 2024

EXTRA-CURRICULAR ACTIVITIES

- Winner, **BlackRock Hackathon** – Built a real-time risk management system.
- Solved **450+ LeetCode problems** to strengthen DSA & problem-solving skills.
